

Services for the Agricultural Industry

MALDIID is a Western Australian based company specialised in R&D services. Our services are designed to survey activity of biological applications in current use and new developing applications for the agricultural market.

Our focus is on delivering quality information regarding biofertilisers, biostimulants and biopesticides to farmers and industry using scientific based services tailored to your needs. Our services range from laboratory, glasshouse to field trials and everything in between (ask us!).

Using biologicals reduces the overall need for chemicals. We are proud to provide services that enable industry to future proof by reducing chemical manufacturing thereby protecting our natural resources and landscapes.
